METHODOLOGY

Sample prepared per USP <621> protocol. HPLC analysis on Waters Acquity UPLC system, C18 reverse-phase column (2.1 x 100mm, 1.7µm). Mobile phase A: 0.1% TFA in water, Mobile phase B: 0.1% TFA in acetonitrile. Gradient elution 5-95% B over 12 min. Detection at 220nm. Mass spectrometry confirmation via Waters Xevo G2-XS QTof. Reference standard sourced from independent verified supplier.
